

Growing Seeds in a Greenhouse on a Window

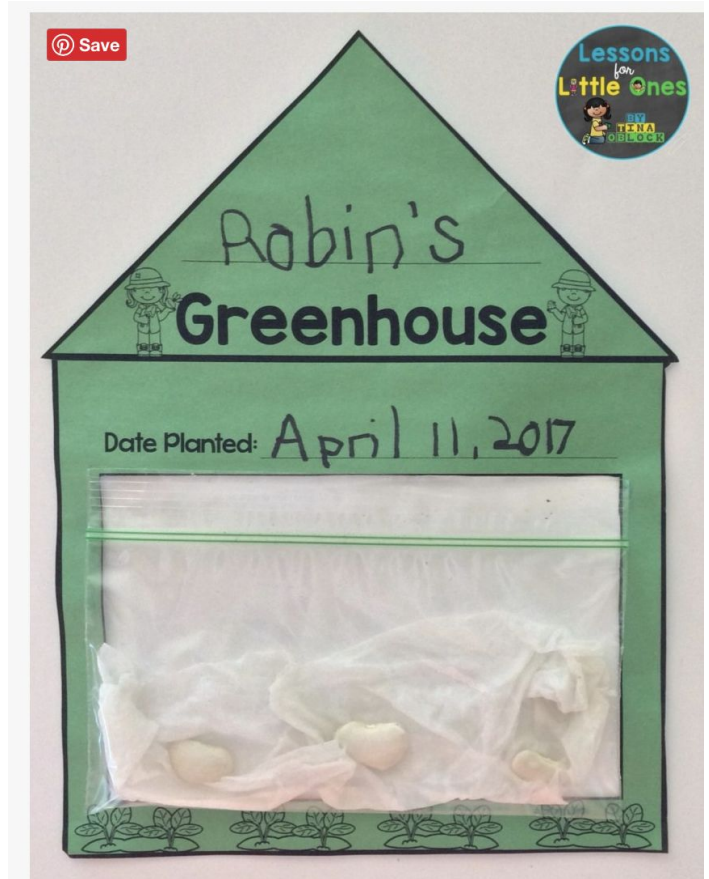

This method requires a bright sunny window on which you can hang baggies that contain the seeds. You are making a plastic baggie “greenhouse” for the seeds.

Step 1: Students will write their name on their construction paper greenhouse. Optional: you can also have them write the date.

Step 2: For each baggie, place a dampened, folded paper towel along the bottom. It should have a fair amount of water but not be soaking or dripping wet.

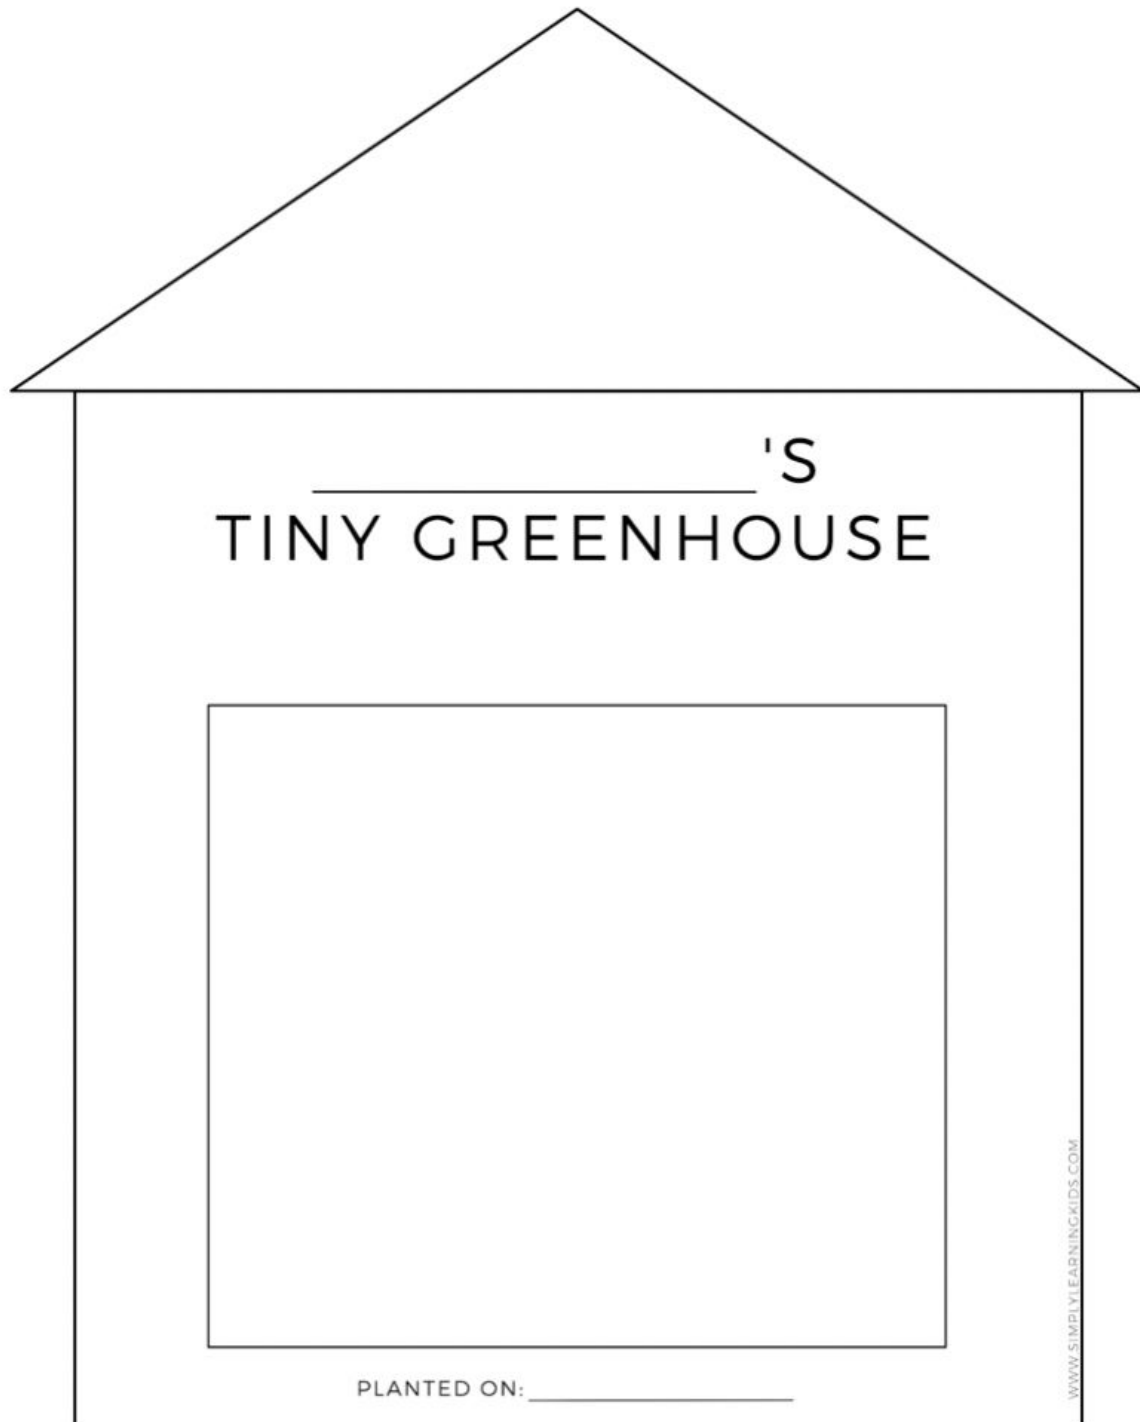

Step 3: Hang them on a sunny window and make daily observations. Attached is a daily log that your child to fill out.

Step 4: Once bean plants have grown - we take the bean plants that have grown to the top of the jar or baggies and carefully put them in soil.

Today I planted a

seed.

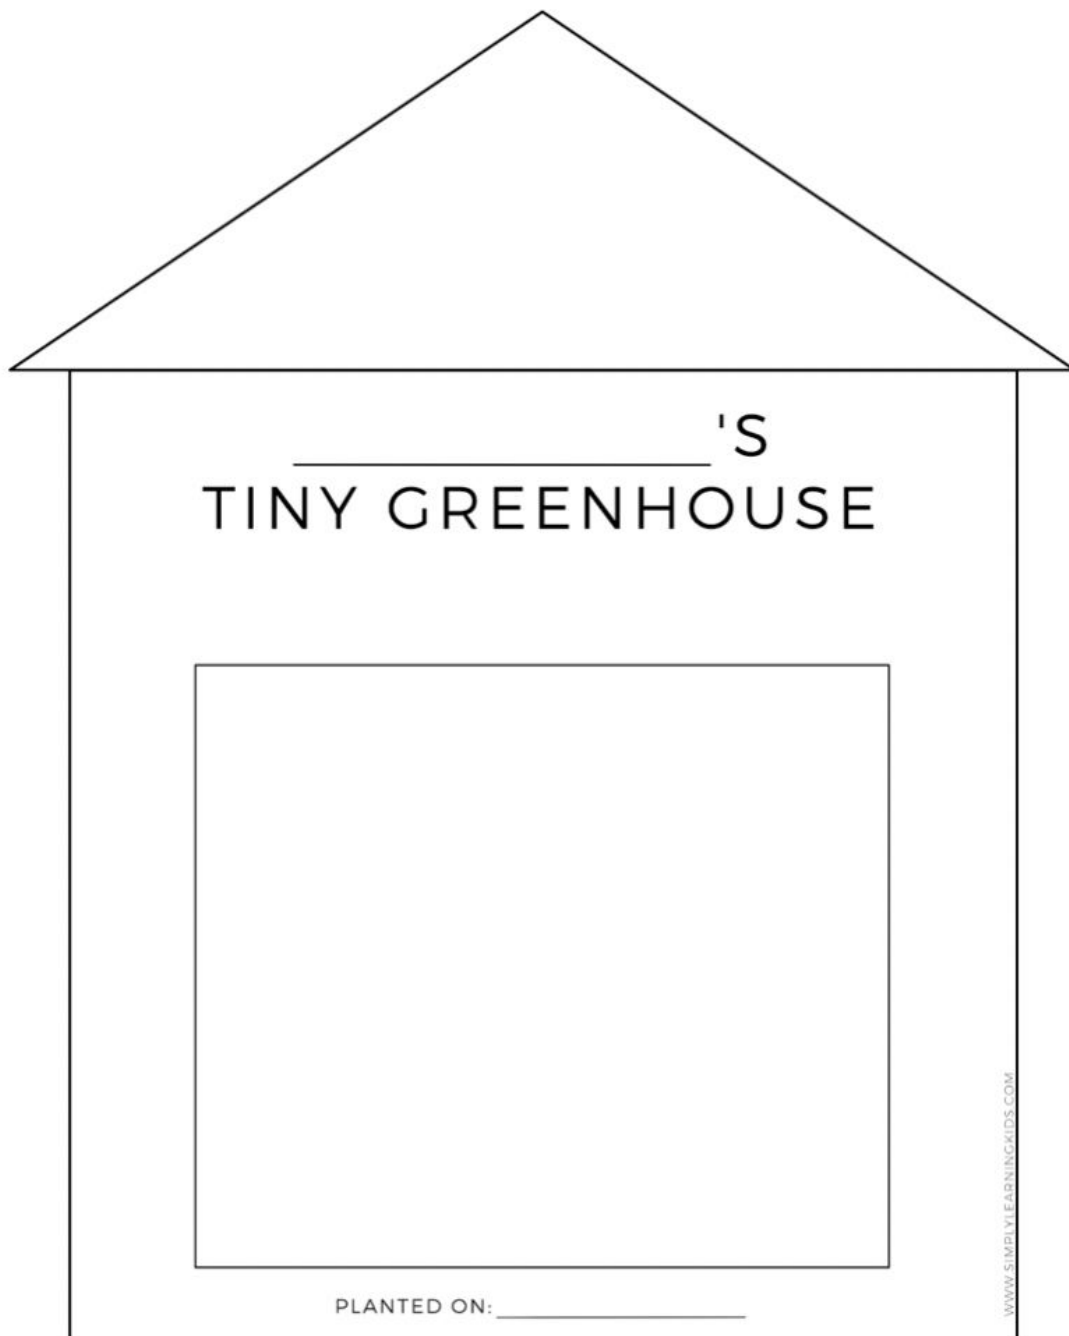

My Day _____ Observation

add number

I see changes to my plant

Yes
